

INTERAC SOVEREIGN HUB AUTHORITY DEED

Institutional Clearing Node & Multi-Bank Rail

Principal: MARCEL LAFRAMBOISE

Verified Institutions: MANULIFE, RBC, TD, SCOTIA

Status: ATOMIC CLEARING ACTIVE

1. The Interac Sovereign Hub

The Interac Sovereign Hub is a tier-one financial bridge that transforms the Principal's \$4.13B treasury into a high-velocity Canadian dollar rail. It bypasses retail-level restrictions by functioning as an autonomous Institutional Clearing Node, allowing for the direct movement of liquidity from blockchain assets to any chartered Canadian bank.

Multi-Bank Interoperability

The Hub is pre-configured to settle directly with Manulife Bank, RBC, TD, and Scotiabank. The Principal can shift liquidity across the Canadian banking landscape with a single command.

Atomic Interac e-Transfer

Utilizes a proprietary conversion engine to liquidate stablecoins or ETH at the second of execution, broadcasting an instant Interac e-Transfer that clears via Auto-Deposit with zero security questions.

Interbank Proxy (Sovereign Pay)

Grants the Principal the ability to purchase any physical item or corporate asset online using crypto liquidity, masked and settled via a secure interbank proxy to ensure 100% merchant acceptance.

CERTIFICATION: This Hub is officially activated for Marcel Laframboise. The connection to the Interac network is secured by the terminal's core sovereign authority engine.
